

SERVICE OVERVIEW

MANAGED FIREWALL

Redcentric's managed firewall services are the first line of defence against malicious attacks.

REDCENTRIC'S MANAGED FIREWALL SERVICES

Redcentric's managed firewall services provide advanced application level security for networking, threat prevention and management whilst delivering predictable performance. They are designed to address the changing nature of the threat landscape, rules are set and traffic is classified by application, source and type to identify threats. Rules are then automatically applied to prevent unauthorised network access providing protection against advanced persistent threats (APT's), automated and targeted attacks.

Redcentric deploys firewalls from leading vendors including Cisco Systems, Fortinet and Palo Alto Networks. Firewalls are available in various sizes, with capabilities configured to meet the individual needs of organisations wishing to enforce network boundary security at small / home office sites through to very large corporate head offices and data centres.

Enhanced Firewall Options

A full range of enhanced options are available with our Managed Firewall services. Intrusion Detection and Prevention (IDS/IPS), Anti-virus and Web filtering functionality is available depending on the firewall, and the vendor, platform and license options chosen.

Delivered as a managed service

We take responsibility for configuration, maintenance and management of your firewalls, as well as updating security patches and ensuring uptime. Our managed service reduces the burden on your internal IT department, removing the complicated management, whilst improving service levels and lowering operational costs.

KEY BENEFITS

- Improved Network Security – Our Managed Firewall service is monitored 24/7/365.
- Reduced Complexity – we take care of the technology, so you don't have to.
- Increased control – our firewall service allows you to gain better control over traffic and users.
- Reduce Costs – by moving to a managed service you take advantage of OPEX pricing model.
- Choice of vendors – we offer firewalls from the leading vendors including Cisco, Fortinet and Palo Alto Networks.
- Resilient – choose either a single device or high availability firewall pairs
- Future-proof – we update your firewalls to provide effective protection against the latest vulnerabilities.
- SLA-backed service – our managed firewall services are backed by industry-leading SLAs.
- Enhanced, next generation firewall options – including Anti Virus, IDS / IPS and Web filtering.

KEY FEATURES

1. Firewalls can be deployed on a Customer's site or within a Redcentric Data centre.
2. Support for site-to-site Virtual Private Networks (VPN).
3. Support for remote client VPNs for home workers.
4. Utilises Network Address Translation (NAT) to hide Customer network addresses from the Internet.
5. Fully configurable rule-base managed by Redcentric's certified security professionals.
6. Customers receive advice and guidance on the effectiveness of the implemented rule-base, and any proposed changes.
7. Application aware, Layer 7 model options available.
8. Unified Threat Management (UTM) functionality options.

WORLD-CLASS SUPPORT

We provide 24/7/365 monitoring and support for our Managed Firewall services, based from our UK Service Management Centre.
